

CRYSTALMINE WHITEPAPER

ENGLISH

Important: Insurance Update and New Phase

As already communicated in the telegram groups, the insurance funds will be distributed more fairly and the game will enter a new phase, based on the following conditions:

- Once 12.5k USDT is reached in the main liquidity, the insurance funds will be injected and will become the new liquidity.
- Players with active insurance points will be able to continue playing normally until the end of their insurance coverage.
- Players with expired insurance points, both before and after the start of the new phase, will have their NFTs deactivated and can reactivate them at the following cost per NFT: **SUPER 70 USDT, LEGENDARY 25 USDT, EPIC 8 USDT, RARE 2.5 USDT, COMMON 0.80 USDT.**
- New players will be able to purchase NFTs at 50% of the mint price, therefore: **SUPER 90 USDT, LEGENDARY 30 USDT, EPIC 10 USDT, RARE 3 USDT, COMMON 1 USDT.**
- All reactivated or purchased NFTs will have a validity of 75 days, which, according to the new ROI, will allow a profit between 1.5 and 2x.

I remind everyone, that according to the initial conditions, at the end of the liquidity, every NFT would have been deactivated regardless, so the new phase is an improvement in all aspects, both in terms of the more equitable distribution of the insurance funds and the new opportunities offered to both old and new players.

The following information replaces that in the following pages regarding insurance, the duration, and the cost of the NFTs.

Please note: the new phase is not covered by insurance and the investments and reactivations are a personal choice and responsibility. The game will end once the new liquidity is finished and will be allowed to reach 0. All balances and withdrawals made once the liquidity is zeroed cannot be withdrawn/processed, so regularly check the existing liquidity. With the reduction of the ROI, an increase in risks should be considered, so evaluate your choices well and if you decide to invest, do so consciously and responsibly.

What is CrystalMine?

CrystalMine is a Play2Earn game that simulates the mining process.

With CrystalMine, players can start and manage their own mining site, activating up to 5 mines. The mining power (Mining Power Points, MPP) is determined by the Crystals (NFTs) one owns, which vary in rarity for each mine. Through mining, USDT are produced.

Players also have access to a Free to Earn lottery, which they can enter daily completely for free.

Join the Telegram groups of the P2E HUB to stay updated and to consult the platform's bot, which can help you find the information you're looking for. Every important announcement will be posted in the official group.

Game link: <https://p2ehub.link>

Official group: <https://t.me/p2ehubofficial>

Why Play?

CrystalMine is an innovative project, created by a team with almost 2 years of experience in the sector. The game combines the successful mechanics already used in previous projects with elements that further enhance its sustainability. The stability of rewards is ensured by USDT, and the key features of the project are insurance for new players and time-limited NFTs, in addition to the Free to Earn lottery. For more information, please refer to the dedicated sections.

The trust of thousands of players is our most precious treasure, and we will always do everything to deserve it.

CrystalMine is a game suitable for everyone, requiring very little effort (production is semi-passive), is economically accessible, and offers long-term profits. It is our newest and most evolved game, with which the P2E HUB takes a decisive and further leap in quality!

Every aspect of the game is covered in detail in this white paper, and its full reading is considered mandatory for a comprehensive and informed gaming experience. The team assumes no responsibility for gameplay errors made due to not reading the document.

Game dynamics

With CrystalMine, you can:

- ❖ Start your mines and extract USDT
- ❖ Improve your mining power through the merge function
- ❖ Extract in a fully automatic and passive manner with the Auto-Miner function
- ❖ Invest more securely thanks to the insurance (see pg.18 for information) and the numerous mechanics designed to ensure sustainability
- ❖ Participate in the rich weekly lotteries in USDT
- ❖ Play in Free to Earn mode, obtaining free lottery tickets
- ❖ Take advantage of the excellent Referral system through direct links to get additional USDT Rewards (5% of the value of each mint from your referrals)

Minting crystals

Crystals are the game's NFTs and you need to possess at least one to start mining USDT.

To obtain them, follow these steps:

1. Click on the "Mint" icon

2. Choose the rarity of the Crystals you wish to purchase and click on the corresponding icon (COMMON 2 USDT, RARE 6 USDT, EPIC 20 USDT, LEGENDARY 60 USDT, SUPER LEGENDARY 180 USDT)

3. Confirm the transaction on MetaMask

After this simple process, a gem of the chosen rarity will be randomly generated, which can have a productivity between 10 MPP and 20 MPP. MPP stands for Mining Power Points.

The odds of obtaining each individual NFT can be found on its card, which you can view in the mint window by selecting the desired Mine.

Each Mine has a maximum of 5 slots (the number will remain the same throughout the game's duration), and it's highly recommended to fill the Mines to maximize production.

Attention: Please refer to the **Recovery Area** section to learn what to do in case of problematic transactions, which can be resolved either independently or with technical support.

Time-limited NFTs

CrystalMine is the first game from P2E HUB to incorporate time-limited NFTs to increase sustainability. From the moment of purchase, the Crystals have a fixed duration of 6 months, during which the player can activate and manage them freely. After 6 months, the NFT will need to be reactivated, and its activation cost will be the same as the Mint cost. The expiration date of each NFT can be found in the "My NFTs" section.

Please note: **the NFTs obtained by the player remain with the player**, so they don't need to be minted again and the reactivation price does not consider the power of the NFTs. If the NFTs have been enhanced through merging, the reactivation cost remains the same for all. Thus, having powerful Crystals offers advantages, both in terms of profits during the first life cycle of the NFTs and for subsequent cycles, where the power/activation cost ratio will allow for higher profits.

To reactivate the NFTs, you will need to deposit the necessary funds by clicking on this button:

The warnings about the deposit are clear and anyone who deposits by mistake cannot withdraw the funds. However, a manual procedure for fund recovery (by contacting support) is allowed under the following non-negotiable conditions:

- the refund has a 20% fee
- if more than 3% of the deposited funds have been used, it is no longer possible to request a refund
- refunds are only allowed for deposits of 25 usdt or more.

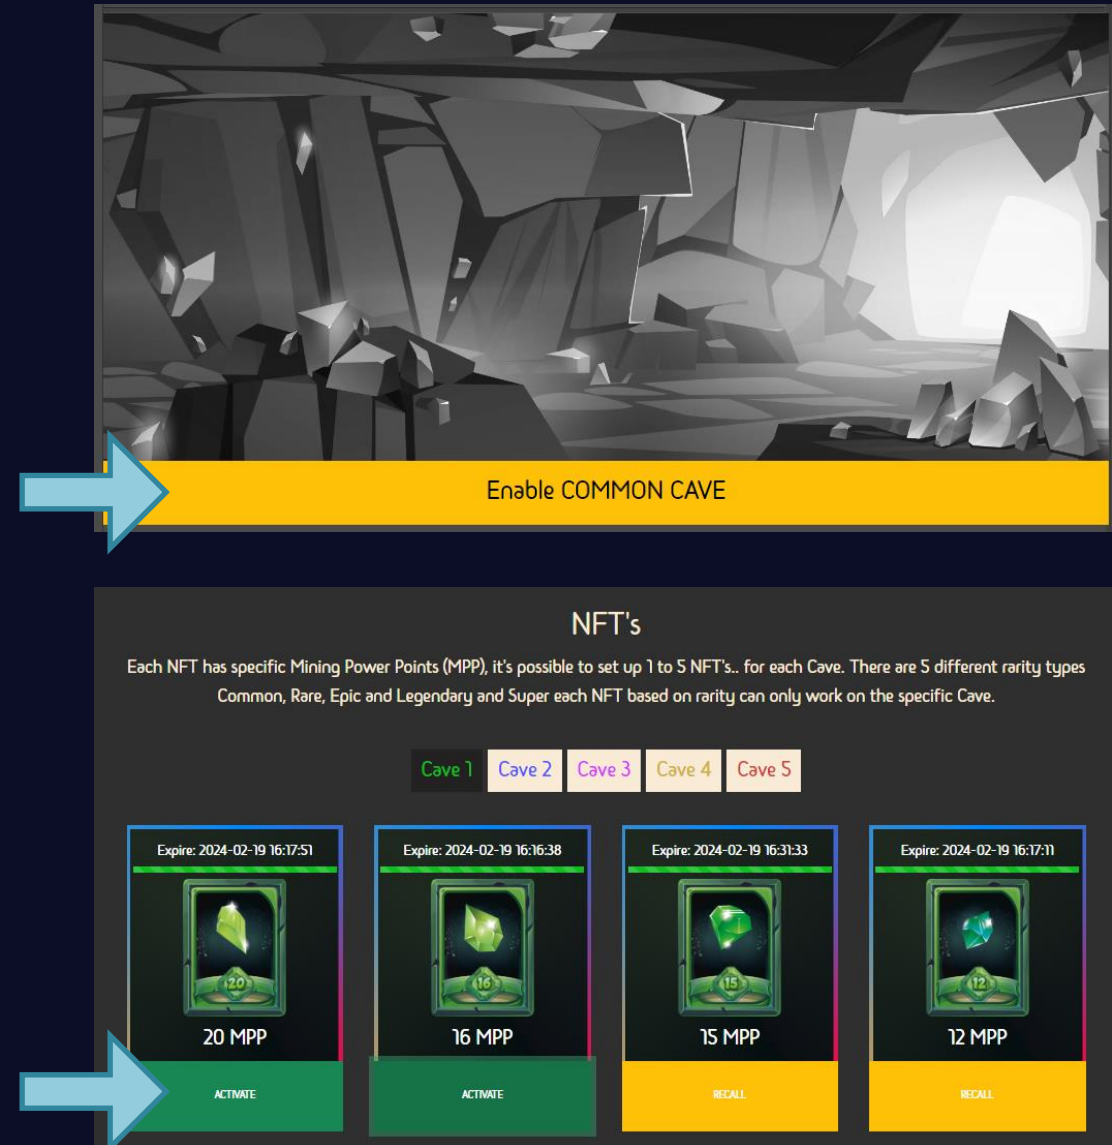

Attention: merging and blending NFTs is NOT a way to extend the life of NFTs. In fact, the system is completely random, and the resulting NFT could take on the lifespan of either the older or newer NFT; it's not possible to determine in advance. Therefore, to avoid risk, it's advisable to merge and blend NFTs with a similar lifespan.

Activation of crystals

Once you have obtained the Crystals, you must activate the extraction of USDT.

To insert the NFTs into the mine and start production, you first need to activate the energy (see the next section) and then go to the "My NFTs" section and activate the Crystals individually.

Each Crystal must be activated individually, and once activated, they automatically position themselves inside the mines. Each NFT has its own Mine, based on rarity, and can only be placed in that specific one. While navigating through the Mines, you can activate Crystals of different rarities, and if there are more than 5, it's recommended to activate the most productive ones. To remove the NFTs from the mine, click on "Recall".

Energy contract / License (1)

The energy contract (license) simulates the operation of a real extraction site where energy is a fundamental element. The same principle applies in CrystalMine: only by activating and maintaining the energy contract can you extract USDT.

Its operation is straightforward. It involves paying a fee every 10 days to keep your mines active. This fee is designed to be much lower than the profits you earn during the contract period. However, some factors need to be taken into account. Just like in reality, only from a certain efficiency and productivity level will profits exceed energy costs. Depending on the total MPP (Mining Power Points) obtained with the mint, having only a few NFTs might not be enough to gain profits. Hence, it's always advantageous to have the maximum number of active NFTs in your mine (5) to maximize profits relative to the fixed cost of the energy contract.

It's advisable to carefully consider which mines to activate based on your budget. It's always better to have more mints in a lower rarity mine than just a few or only one in a higher-level mine.

The energy contract, which lasts 10 days, has a fixed cost for each Mine, as follows: **Mine 1: 0.50 USDT**, **Mine 2: 1.5 USDT** , **Mine 3: 5 USDT**, **Mine 4: 15 USDT** , **Mine 5: 45 USDT**

Leaving the contract inactive does not lead to a loss of NFTs. They will always remain in the player's account. However, it will not be possible to activate production.

Energy contract / License (2)

CrystalMine's energy contract is one of the key functions of CrystalMine, because it ensures the project's long-term sustainability.

The energy fee is divided as follows:

45%: insurance

5%: lottery

10%: ecosystem

40%: marketing and game management costs (distribution at the discretion of the Team, as costs vary)

Thanks to this mechanic, insurance, lottery, marketing, and management costs have no negative impact on the players' investments and therefore on liquidity.

If the insurance funds were to reach a very high threshold, sufficient to guarantee total coverage for new players, the funds may in the future be reallocated to liquidity. Moreover, if the game's liquidity falls below 50% compared to its peak, the Team reserves the right to allocate the percentages of insurance, ecosystem, and lottery to liquidity to protect it and extend the life of the game. As long as it is active, CrystalMine has priority over all P2E HUB projects.

The Team is committed not to change the energy costs for the entire duration of the game.

Please note: our Team has always stood out for its honesty and transparency. The P2E HUB, including CrystalMine, generates significant management costs, resulting from the continuous development of projects, the constant work of team members (including moderators) and temporary external collaborators (such as the designer and dev helpers), platform management costs (website, server, constant maintenance), and more. These costs, as mentioned, are covered by a portion of the fees and are necessary for the maintenance of the platform and its continuous and constant development. The percentage destined for management costs has always been amply covered by external revenues (ecosystem, parallel projects, and advertising revenues), and this will also be the case for CrystalMine.

Mine earnings

The NFTs all have the same power (from 10 MPP to 20 MPP) and what determines the earnings in the individual Mine is the rarity multiplier. In fact, each MPP has its own value in USDT, depending on the Mine:

MINE 1: 1 MPP = 0.01 USDT (claim after 5000 minutes)

MINE 2: 1 MPP = 0.03 USDT (claim after 5000 minutes)

MINE 3: 1 MPP = 0.1 USDT (claim after 5000 minutes)

MINE 4: 1 MPP = 0.3 USDT (claim after 5000 minutes)

MINE 5: 1 MPP = 0.9 USDT (claim after 5000 minutes)

These values can be seen within the game itself, when activating the electricity contract. The value is found within each individual Mine.

Merge of NFTs (merging of identical NFTs)

The merge is a strategic feature because it offers the possibility to improve one's Crystals, increasing the total production power. When you get 2 or more identical NFTs, you can use the merge function, which is totally random, having the same % of outcome for all NFTs. With the merge, you can obtain NFTs from 15 MPP up to 20 MPP.

In the case of identical and low-power NFTs, the merge can be crucial to increase the production power of your mines, because the higher the MPP, the higher the net profit in relation to the cost of energy.

The function is recommended with NFTs between 10 MPP and 15 MPP since the fusion can generate NFTs starting from 15 MPP up to 20 MPP.

Please note: even if the merge initially can produce a reduction in MPP (Example, $2 \times 10 = 1$ of 17 MPP), the feature is essential to maximize one's Mine and one's long-term profits, both in relation to the energy contract and the reactivation of the NFTs. In fact, NFTs have a lifespan of 6 months, after which they will have to be reactivated based on the Mint cost. The cost is always the same, and the greater the power of your NFTs, the higher the long-term profits and the convenience of reactivating them. In fact, your NFTs always remain the same throughout the duration of the game.

Attention: The NFTs generated by the Merge have validity randomly taken from those of the NFTs used during the procedure. It is strongly advised against using one or more NFTs whose expiration is near because the new NFT could expire soon and have to be reactivated. Use the Merge only with NFTs with a similar expiration date.

NFT blend (NFTs upgrade)

The game also has a blend function between the Mines, which allows obtaining a higher rarity NFT through the union of 3 lower-level NFTs.

The blend is not available in Mine 5, since it represents the maximum rarity.

The union of 3 NFTs generates a higher rarity NFT in a totally random way, with power between 10 MPP and 15 MPP.

The blend is very convenient, especially if you own many low-level NFTs. In this case as well, the % of outcome is the same for all NFTs.

Attention: the NFTs generated by the Blend have validity randomly taken from those of the NFTs used during the procedure. It is strongly advised against using one or more NFTs whose expiration is near because the new NFT could expire soon and have to be reactivated. Use the Blend only with NFTs with a similar expiration date.

Mine management and control panel

Here the production of your Mine is indicated, in USDT

Mining activation button

Note: you don't need to leave the game open in your browser to keep mining going. Your computer or mobile device doesn't even need to be turned on. CrystalMine does not use player resources to keep mining going.

Insurance (1)

The insurance is one of the fundamental elements of CrystalMine because it allows everyone to enter the game with greater peace of mind and security. The insurance is a fund in USDT, which is constantly fed by energy fees, and is intended to be distributed among the players who will join in the last 3 months of CrystalMine's life, i.e., within 3 months from the future day of liquidity depletion.

Its operation is very straightforward. Every time a new game account is opened, this account has 3 months of insurance coverage. All NFTs purchased during that period assign insurance points:

Common: 10 points

Rare: 30 points

Epic: 90 points

Legendary: 270 points

Super Legendary: 810 points

These points, after 3 months, will no longer be withdrawable. If the liquidity were to run out during that period, the insurance points will be converted into real money, based on the ratio between the funds present in the insurance and the total valid insurance points at that time, i.e., the points of the last players. Through this ratio, the value of USDT for each insurance point will then be derived, and the funds will then be freely withdrawable by all those entitled to them. Example: insurance funds 200k / 400k valid insurance points = 0.50 USDT/PT. This example is for explanatory purposes and is based on hypothetical data).

Insurance (2)

45% of the energy taxes flow into the insurance, and the fund could grow to such an extent that it even allows profits for the last players who entered CrystalMine. This mechanism ensures that the last players are covered by players who entered earlier and have therefore been active for over 3 months, creating mutual support.

The insurance will aim to offer one of the objectives that is closest to the Team's heart, namely the opportunity to enter the game at any time, having solid basic guarantees.

To view the data on your insurance, click on this icon:

Attention: the insurance will be valid exclusively for 90 days from the opening of the account. Investments made beyond this period will not provide valid insurance points. Obviously, after the expiration of the insurance, the player will have already recovered all or a large part of the investment, so it is right that he no longer has the right to it. It is always advisable to study your game strategy before opening the account, in order to decide whether and how much to exploit the potential of the insurance.

Claim

The "claim" function allows players to claim the profits generated through production within their Mine, which will then accumulate in their game balance. Claims are made automatically every 5,000 minutes in all Mines. Once a claim is made, mining is halted and must be reactivated. Once the Mine is activated, the progress bar indicates how many minutes are left until the next claim.

Claims are an integral part of the gameplay, and production must be regularly reactivated to achieve a consistent production of USDT. As an alternative to manual claims, there's the Auto-Miner, which automatically reactivates production.

The claim time is designed to ensure long-term sustainability. However, if needed, it can be adjusted in the future to rebalance the game's economy. Currently, no changes are anticipated or planned.

Attention: the use of external autoclick software is prohibited. The game has an anti-bot system, and if it detects irregularities, it can ban the account. A banned account cannot be retrieved, so never use external software to manage the game.

Withdraw

You can withdraw your profits whenever a minimum balance of 5 USDT is reached.

Withdrawals are processed between 10 and 22 UTC. Sometimes it may take longer than expected. Contact support only if the withdrawal hasn't arrived after 24 hours.

A small fee (3%) is applied to the withdrawal, which solely contributes to maintaining liquidity and remains entirely within the Pool.

Only one withdrawal can be made every 7 days.

Auto-miner (passive mining)

ACTIVATE AUTO-MINER

The Auto-Miner function allows for passive operation of your Mine. It costs 5 USDT and lasts for 20 days. The Auto-Miner is advantageous beyond a certain production level and guarantees the maximum possible profits during the period it is active. The funds derived from the Auto-Miner function are divided in the same way as those from the energy contract, since they are directed to the same wallet.

Attention: the use of external autoclick software is prohibited. The game has an anti-bot, which, if it detects irregularities, can ban the account. A banned account cannot be recovered, so never use external software to manage the game.

Recovery area

If problems or interruptions occur (such as connection drops, browser shutdown, etc.) during the minting of new NFTs or during the purchase of energy contracts, lottery tickets, etc., you can retrieve your purchases in the Recovery Area. If the area is empty, you can then write to customer service, which will take care of the recovery in a short time. In this case, it is always useful to note the txhash of the problematic transaction, as it will be requested during support. You can view all transactions made with your wallet on bscan.com.

The deposit area (NFT reactivation and lottery) has its own recovery area.

Attention: once recovered, the contracts activate and replace any other active contract of the same type. Wait for the current contract to end before retrieving it. The replaced contracts will not be refunded.

Lottery (Free To Earn)

CrystalMine has an internal lottery, a feature accessible to everyone that allows you to earn extra USDT. Each round of the lottery lasts 10 days. The lottery jackpot is covered by 5% of the energy fees and will be managed based on available funds. You play using available tickets, which generate a random number from 0 to 999.99. The highest numbers enter the leaderboard, and there are 50 paid positions. Players who are on the leaderboard at the end of the round receive the USDT prize indicated.

The following page lists the ways to participate in the lottery, including one that is **completely free**.

By clicking this button you play a ticket

Here you can redeem your daily free ticket (non-NFT players only, others get it automatically)

RECOVER			
2,00 ₮	5,00 ₮	10,00 ₮	25,00 ₮
50,00 ₮	100,00 ₮	250,00 ₮	500,00 ₮

Lottery (2)

Participation in the lottery can be:

- **Free and automatic** for those who own at least 1 NFT. Tickets are assigned daily and are cumulative, but unused tickets will be removed at the end of the round.
- In **Free to Earn mode**, valid for players without NFTs. In this case, every day it will be possible to redeem and play a free ticket. To activate the Free To Earn mode, you must register in one of the P2E HUB Telegram groups (or other official social channels) and write in the chat:
 - **"I request the activation of the free tickets. My ID: xxxx"**
The mode will be unlocked manually shortly.
- By purchasing 1 or more tickets, by depositing funds into the lottery. Each ticket costs 1 USDT, and several deposit options are available.

100% of every ticket purchased goes towards supporting the sustainability of the lottery, entering into the liquidity. When a ticket is played, the generated number is only considered if it's higher than the number of the previous ticket. So, by playing the available tickets, you can only improve your score.

Referral System

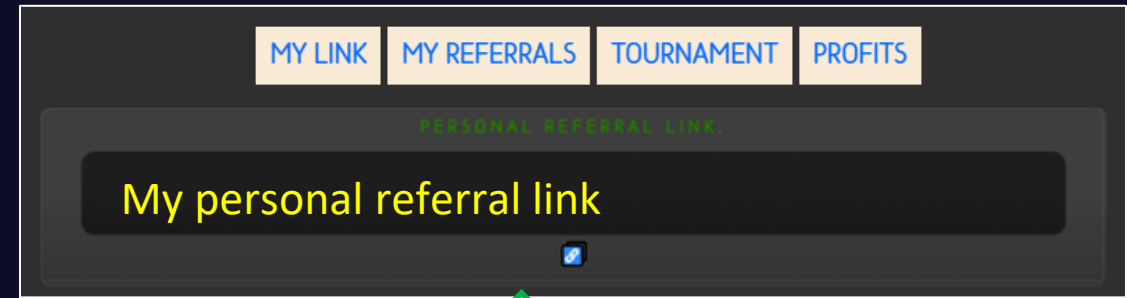

CrystalMine has an excellent referral system, which allows you to earn 5% from every mint of your referrals! To activate the rewards, just share your **PERSONAL REFERRAL LINK** with friends and acquaintances. If they connect to the game through your referral link, you will receive 5% of every NFT they purchase.

There is no limit to the number of referrals you can have. To withdraw the funds obtained from your referrals, **you need to have a balance of at least 5 USDT and own at least 5 NFTs in the account**, in order to avoid accounts opened solely to benefit from the system.

Warning: updating the page (for example changing wallet on metamask) removes the referral link. If you update the page, re-enter the link before logging in.

TOURNAMENT: Until December 15th, there is a major tournament for those who earn the most rewards from their referrals. 15 paid positions and a prize pool of over 2500 USDT!

Referring oneself is allowed in case of opening additional accounts.

Referrals Rewards 5% each MINT

Common Mint	Rare Mint
0.10 USDT	0.30 USDT
Epic Mint	Legendary Mint
1 USDT	3 USDT
	Super Mint
	9 USDT

P2E Mobile

It is possible to play CrystalMine on mobile devices using TrustWallet and Metamask (for the Mint and management of Mines) or the Kiwi Browser + Metamask (for the management of Mines).

Important: the process of Minting NFTs or any other action that involves a purchase via mobile device is supported only through the use of Trust Wallet and Metamask. If the process is carried out in other ways, the CrystalMine Team will not be able to assist you in case of difficulties.

In case of need, contact technical support (moderators) and provide the TxHash of the problematic transaction. If it is about an unactivated energy contract, do not make further attempts and wait for the resolution from support.

It is possible to use Apple devices, but in case of problems, the recovery of NFTs or contracts may need to be carried out via a PC or Android device.

Sustainability (pag.1)

As already anticipated in other sections of the whitepaper, CrystalMine will eventually come to an end, and the insurance will benefit the last players who joined the project (within 3 months). However, every element and game mechanic has been designed to ensure long-term sustainability and extend its lifespan as long as possible. Below we summarize the strengths of the project:

- **Dynamic Rewards:** The rewards do not have a set percentage and depend on several factors. With the random Mint mechanism, one can be more or less lucky, and the same goes for the use of the merge function, which at the same time ensures total impartiality (same % output for every NFT) and an overall improvement in one's productivity.
- **The Light Contract:** This element is one of the key mechanics for a long game duration since it allows the liquidity derived from the purchase of the NFTs to remain completely intact. The light contract indeed covers the management costs of the project and also feeds the insurance and lottery. Moreover, it creates a crucial internal mechanism, whereby the team itself requires the stable and constant presence of players within the project, a mutual bond. Unlike many other P2E projects, in CrystalMine, the players' initial investment does not weight the project's maintenance, but rather their long-term presence, and the team will always give 100% to ensure it.
- **Impartial NFT Minting:** The minting of NFTs can be obtained only after full payment of their price, making the system entirely secure and impartial. In essence, the team also has to pay full price for every single NFT, which prevents any potential abuse of the Mint function and any hypothetical external compromise. Compared to other projects, marketing will not offer NFTs as compensation, and all those that will be up for grabs for events or otherwise will have contributed to liquidity. In short, NFT distribution will never weigh on sustainability.

Sustainability (pag. 2)

- **External Revenues:** CrystalMine is part of the P2E HUB project, a platform that aims to gain more and more weight in the world of Play To Earn. Boasting numerous games and thousands of players, the platform will attract increasing international visibility and enhance resources obtained through the ecosystem. Projects like Surfi, for instance, will provide ever-increasing contributions through external clients, who can advertise their projects within our community, supporting the HUB and CrystalMine. The ecosystem is continually evolving and will carry more and more weight!
- **Stablecoin as Game Engine:** USDT is a stable cryptocurrency; therefore, players know that their rewards will never be at risk from market movements or the unstable value of a proprietary token, which CrystalMine does not have.
- **Insurance:** As previously mentioned, the insurance is an absolute novelty and aims to offer greater peace of mind and security to all new players, always. This feature will allow anyone, even after many months (or hypothetically even years), who wants to join the game to never feel "late". This consideration, combined with the others, makes potentially entering the game profitable and safe at any time.
- **6-Month NFT Duration:** Thanks to this mechanic, a limit is set on unlimited earnings without the active participation of players in the economic health of the project. After each NFT cycle, the player can decide whether to continue playing, reinvesting part of their profits to reactivate the NFT, or stop production, effectively exiting the game.

All the information in this section has been deduced after careful reflection and a long design phase. Although reliable, they should still be considered as hypotheses based on the Team's experience and its general objectives, not as facts.

Faq (1)

In this section, we will answer some questions that might be of interest to both new and old players:

- **How long will CrystalMine last?** It's impossible to determine the exact duration of the game in advance because it depends on various factors, including the number of players and the amount of external revenue. The game will have an end, when liquidity runs out, but mechanisms such as the expiry of the NFTs and insurance offer more security for new players and potentially a long duration! Currently, it's not possible to say whether it will last less, more, or like previous projects, but if the insurance is sufficiently high, it will allow the last players to not only recover their investment but also make a net profit. Moreover, as done in previous projects, special attention will always be given to those who cannot recover their investment, and a "loyalty" phase similar to that of MiningRoom's might be introduced to assist these players.
- **What is the estimated recovery time of my investment (ROI)?** Although the NFTs are generated randomly during the purchase, making the ROI dynamic, their power, in relation to the energy cost, provides a faster ROI compared to previous projects, which averages between 2 and 3.5 months. With great luck, it could be less than 2 months. The ROI, during the first life cycle of the Mines and during subsequent ones, is also influenced by players' strategies.
- **Several months (or more than a year) have passed since the game's launch; should I join?** Very likely, yes. If the insurance funds are very high, there will be substantial support for all new players, and it might be advantageous to join the game until the end, even in the presence of low liquidity, precisely because the insurance would guarantee the recovery of the investment and potential profits (within 3 months from the end of liquidity). Before joining, it's always advisable to check the game's liquidity and the level of insurance funds to get a clearer overview of the game's health.

Faq (2)

- **Has the life cycle of my NFT ended (after 6 months), should I reactivate it?** Probably, yes, based on the level of liquidity present in the game and the mining power of your account. If it has been enhanced, for instance through merges, reactivating the NFTs is the best choice. Alternatively, it's also possible to open a new account if it makes sense to be covered by the insurance again (for example, in the case of low liquidity).
- **Is the team trustworthy? Can I trust them?** Yes, the team has always proven to be honest in its first 2 years of operation and has no reason or interest in committing any illegal acts. The P2E HUB is not only a platform but also a big family, and its success depends on the great trust of the community, which it's very proud of! Every team member has their job outside and supports themselves independently, so their work is done out of passion and for the right rewards obtained with the great daily effort dedicated to the platform, without taking anything else away from the projects. The success of the P2E HUB and its games is considered very important, and the team will always do everything possible to achieve it! For more specific questions, you are invited to ask the community directly for an honest opinion.
- **Where can I check the game's liquidity and details related to the game's economy?** Each of these aspects can be verified using the official bot within the P2E HUB's Telegram groups. The bot provides updated wallets of the Pool(s) (liquidity, insurance funds, light contracts). To protect liquidity, the team regularly renews the wallets and divides the funds to ensure greater security.

Attention to the Community

As previously mentioned, CrystalMine is a project with a set term (whose total duration is unknown). Once this term is reached, the insurance fund will be distributed. This basic factor remains unchanged, and the gaming experience depends on the choices and strategies of the player. The team commits to maintaining the game's economy as presented in this document, to not influence the players' actions. However, in case of need and to ensure a positive and constructive gaming experience, the team is ready to listen to the community and, as always, to assess and, if necessary, propose changes. The team, therefore, reserves the right to conduct votes and adjust aspects of the game and its economy, but only with the community's acceptance. Any vote must pass through at least two approval levels and take into account the opinion of all communities. If there are, votes will have a minimum duration of 24 hours. Actively participating in our community offers significant advantages, so everyone is encouraged to regularly follow updates in the groups and join discussions. The team assumes no responsibility for missed information or votes due to a personal choice not to be active/present in the community. This notice does not imply the holding of future votes but only theorizes the possibility.

Disclaimer

The information provided in this white paper and the game's features do not in any way constitute investment advice, market trading advice, or any other type of financial or general advice, and this information should not be treated as such. CrystalMine is a Play-To-Earn game, and its management should be considered a recreational activity.

The team assumes no responsibility in case of game errors made due to not reading the document.

Even though CrystalMine uses USDT, a stablecoin, users should be aware of the risks associated with using any blockchain-based platform and stablecoins in general. While USDT is designed to maintain a stable value, it may carry associated risks such as trust in the underlying reserve or potential regulatory issues. Users should be aware of technological and regulatory risks and should act prudently. The team assumes no responsibility for any losses suffered by users, and all financial decisions should be made cautiously and at one's own risk. The P2E HUB operates as an independent entity and is not affiliated with or endorsed by other platforms or entities.

Reading the white paper is mandatory for a complete and informed gaming experience.

HAPPY MINING!
